

12 March 1968

Mr. Bannerman:

Mr. [redacted] called and left the following message:

"We have received only five cases of individuals who would have been tested but have not been tested due to our suspension of FCDP. These are all the statistics presently available. However they are not a clear indication of the true picture because, short of calling each of the [redacted] recruiters and asking them for their figures as to how many applicants they had interviewed that would have been tested, we are unable to give an accurate answer. Dr [redacted] however, does have figures taken from previous years which should reflect by comparison a more accurate picture.

Testing has been discontinued for approximately 10 days and because of this the majority of applicants have not yet returned their completed application forms. This usually requires an average of a month.
